Experience

Software Development Engineer I April 2026 – Current
Expedia Group *Rome, Italy*

- Led architecture for a **dynamic content-personalization feature** on a service handling **21,000+ req/min**, scoping work across three microservices.
- Built a **gRPC client in Kotlin/Spring Boot** with **circuit-breaker fault tolerance**, preventing silent error swallowing; kept **97%+ test coverage**.
- Migrated a legacy **React UI component** to a config-driven module on a new search API, shipped via **A/B testing** across **60+ locales**.
- Fixed **production/CI-CD reliability issues** — i18n bugs, flaky tests, service cold-starts.

Backend Developer September 2025 – April 2026
Viqal *Amsterdam, Netherlands*

- Deployed **Jenkins CI/CD on AWS**, cutting release failures **25%+**.
- Built **Python/PostgreSQL** backend for **Public AI Assistant** feature, helping land **2 enterprise clients**.
- Refactored legacy code with CTO, improving architecture and scalability.
- Built automated **24hr log analysis pipeline**, speeding incident response.

Associate Developer July 2022 – July 2023
Sky UK *Osterley, UK*

- Designed a **CI/CD pipeline** for end-to-end automation tests, cutting testing time by **35%**.
- Built containerized **data services** linking web apps and backend services, improving scalability.
- Built automation tools with **Jenkins, React, and Python**; fixed critical bugs in a large legacy codebase.
- Deployed full-stack apps with **NGINX and Docker**, improving infra reliability.

Education

University of Surrey Guildford, UK
Masters of Computer Science - First Class Honours (Integrated) *September 2020 – July 2025*

Projects

Medical Named Entity Recognition | *Python, SpaCy, React, MongoDB, Docker*

- Developed a **medical Named Entity Recognition (NER) model** using state-of-the-art architectures, achieving **state-of-the-art accuracy** (**99.3%** on internal validation data) for medical entity extraction and addressing challenges like noisy input and context variation.
- Built a **web application** with automated NER processing and data annotation, reducing manual effort by 78%, simplifying deployment with Docker, and integrating a user-friendly interface for **100+ medical personnel**.
- Designed an **automated multi-stage training pipeline**, enabling seamless integration of new medical data, improving model adaptability and performance in real-world applications.

Technical Skills

Programming Languages: Python, JavaScript, HTML/CSS, Shell Scripting, Java
Databases: SQL, MySQL, MongoDB, PostgreSQL, NoSQL
Cloud/DevOps: Docker, AWS, GCP, Jenkins, NGINX
Frameworks/Libraries: React, Node.js, Flask, pandas, PyTorch
Tools & Methodologies: Linux, Agile, SDLC, OOP

Profile

I am a highly motivated and competitive individual, committed to achieving the best possible results and continuously developing my professional skills. I trust in my creativity and imagination to generate innovative and practical solutions for any challenge. I constantly strive to be the best version of myself in all areas of life. Furthermore, I believe that knowledge is boundless, a limitless measure that can always be expanded.
